(a) orbit, logarithmic axes
whole trajectory
periodic orbit ($t > 10^6$)
equilibrium
$\log_{10} c$
$\log_{10} b$
(b) spiral, $0 \le t \le 0.45$
1e−2
$c - 1/100$
$b - 1$
(c) one period (about $2.5 \cdot 10^6$)
$\log_{10} c$
$\log_{10} b$
t (10^6)
